## Junior Backend Developer

### Objective

---

Motivated junior backend developer with a strong foundation in building, maintaining, and optimizing server-side logic for web applications. Proficient in developing RESTful APIs, designing databases, and conducting feature and unit testing. Experienced in testing APIs and documenting processes to ensure clarity and usability. Committed to implementing essential security measures to protect sensitive data and proficient in using version control systems. Eager to continually learn new technologies and enhance skills in a collaborative environment

### Experience

---

#### IT Company

August 2024 – Now

Fullstack Developer

United Arab Emirates, Dubai

- Developed an ECommerce platform utilizing Laravel for the backend and Next.js with Tailwind CSS for the front end, ensuring a seamless user experience.
- Implemented dark mode and light mode features, along with bilingual support for Arabic and English, enhancing accessibility for diverse users.
- Utilized Axios for efficient API requests and ensured a responsive design across various devices.
- Built a robust backend with Laravel and MySQL, creating a RESTful API to manage product CRUD operations, enabling users to place orders and check cart items.
- Conducted thorough API testing using Postman to ensure reliability and performance.
- Developed an authentication system using Laravel Sanctum to secure user access and data.
- Created comprehensive documentation outlining the backend stack and providing instructions for project setup.

#### IT Company

February 2024 – September 2024

Junior Backend Laravel Developer

Türkiye, Ankara

- Developed and maintained RESTful APIs using NestJS and JavaScript, ensuring scalable and efficient backend services.
- Integrated and managed MongoDB as the database solution, optimizing queries and performance.
- Conducted thorough API testing using Postman, including writing automated test scripts to ensure endpoint functionality.
- Gained experience with Cypress for end-to-end testing to verify application workflows.
- Created detailed API documentation using Swagger, facilitating ease of integration and usage for frontend and third-party developers.
- Performed Unit Testing and Feature Testing for backend projects in Laravel, ensuring code quality and reliability.

#### Inter2Grow

December 2023

Backend Developer Intern

- Created a Personal Blog API i built an API that handles CRUD operations for articles of a single blogger. Implement Authentication .
- used Blade as a template engine to create a website of 3 pages (login, signup, and profile), where the user can create a new account, log in to an existing account, and view his username and email on profile page
- Created a Proxy Server, that can receive request\_url, headers, and body from the client, handle the API request, and give the response data back to the client. .

#### Fiverr

October 2022 - December 2023

Web Developer Freelancer

- Building Static Pages: I develop sleek and modern static pages using React.js, ensuring fast load times and a smooth user experience.
- Bug Fixing: I offer troubleshooting and debugging services for existing websites, helping to resolve issues and enhance functionality based on your feedback.
- Website Conversion: I convert designs from PSD or Figma into fully functional websites, using front-end technologies such as HTML, CSS, and JavaScript. My focus is on maintaining the integrity of your design while ensuring seamless usability across all devices.
- Responsive Design: I create responsive layouts that adapt beautifully to any screen size, ensuring your website looks great on desktops, tablets, and smartphones.

## Projects

---

### Toring Full web application | *Laravel, Php, Mysql*

January 2024

- Developed a full-stack web application using Laravel for managing create, read, update, and delete (CRUD) operations
- Implemented user authentication and role-based authorization to control access to different sections of the app.
- Utilized Laravel's built-in features such as middleware for authentication and policy classes for fine-grained authorization.
- Integrated secure password management and user session handling.

[source code](#)

### Full-Stack CRUD Application (React, Laravel, MySQL): | *Reactjs, Laravel, Mysql DB, Html css, Git*November 2024

- Used React hooks and state management for efficient and responsive UI updates.
- Built a dynamic web application using React for the front end, Laravel for the backend, and MySQL as the database.
- Implemented full CRUD functionality, allowing users to create, read, update, and delete data in real time.
- Integrated user authentication and session management with Laravel's backend API.

[source code](#)

### Ecommerce Website Application | *Laravel, Blade, MYSQL, SQL*

December 2023

- Developed a full-featured ecommerce platform with product listings, cart management, and an admin dashboard.
- Implemented functionalities such as adding products, viewing product details, adding items to the cart, and removing them.
- Built an admin dashboard for managing products, orders, and user data, with role-based access control for security.
- Designed and optimized the database with MySQL, utilizing relationships like one-to-many and many-to-many to structure product, order, and user data.

[source code](#)

### Portfolio Website (Next.js) | *Nextjs, State Mangement, Typscript*

October 2023

- Emphasized clean, modern UI design with Tailwind CSS for efficient styling and layout adjustments.
- Utilized server-side rendering and static site generation for improved performance and SEO.
- Designed and developed a personal portfolio website using Next.js to showcase projects, skills, and experience.

[source code](#)

### Proxy Server (Laravel, PHP):

October 2023

- Built a proxy server using Laravel to handle client requests, forward them to external APIs, and return the response.
- Ensured secure data handling with proper validation, and optimized performance by managing headers and caching where necessary.
- Leveraged Laravel's robust routing and middleware system to process API requests and manage authentication, logging, and error handling.

[source code](#)

### Social Media Platform: | *PHP, MySQL, SQL*

August 2022

- Developed a social media platform using pure PHP and MySQL with user authentication, registration, and login functionality.
- Enabled users to create profiles, upload profile pictures, and manage their personal information.
- Designed the database with MySQL to store user information, friends, and uploaded media, utilizing efficient SQL queries for data retrieval and relationship management.
